Modular storage system with fixed to the floor modules, for storage of sleeves, adapters, anilox and cliché

Advantages

▶ Stability and Durability

The solid structure of Ulmex warehouses offers long-lasting durability and wear resistance. Unlike other solutions on the market, Ulmex warehouses maintain their integrity even at full capacity, without bending or deforming.

▶ Modular Expandability

Ulmex warehouses feature a modular structure with unlimited expansion possibilities. Additional modules can be added at any time to accommodate a growth in the number of sleeves over time.

▶ Space Optimization

The arrangement of sleeves on nine rows on the shelves provides effective space management, maximizing storage capacity. This unique solution in the market allows for efficient use of available space.

▶ Ease of Repositioning

Unlike competitors, Ulmex warehouse shelves can be easily disassembled and repositioned by a single person, allowing flexible positioning on different rack levels.

▶ Intelligent Storage of Clichés

Ulmex warehouses offer a smart solution for cliché storage, using robust and practical shelves. This eliminates the presence of scattered boxes or bags throughout/all over the working area.

▶ Ground-Level Sleeve Positioning

The positioning of sleeves 180 mm above the ground facilitates access to second-level sleeves, offering superior ergonomics compared to competitors. The standard solution allows for the placement of two sleeves of 1450 mm.

▶ Integrated Protection

The ability to install closures on individual racks protects stored material from light and dust. This accessory also contributes to extending the life of the adhesive applied to the sleeves.

▶ Easy Translation

The easy movement of racks, even at full capacity, is ensured by the use of specific cushions that ensure maximum smoothness.

▶ Integrated Safety

The dedicated centering system prevents sleeves from falling under any conditions, ensuring a quick and secure securing process.

▶ Efficient Organization

Magnetic frames and magnetic labels simplify the search and identification of stored sleeves, offering an efficient organizational system.

▶ Protection against Impacts

Bumpers on individual racks prevent unwanted collisions between racks during movement.
